**Notes 1:**

- a) **Capital Protection:** Preserve capital while seeking growth at rate linked to a stockmarket Index. Recommended investment period is 3-5 years.
- b) **Capital Growth:** Maximize capital appreciation or the increase in value of a portfolio over the long term. Investments targeted for capital growth tend to have more risk than assets chosen for capital protection and income generation. Recommended investment period is over 5 years.
- c) **Income Generation:** Investment income earned from interest, dividends etc as opposed to that derived from increases in asset value. Risk is usually less than investments targeted for capital growth.
- d) **Income Generation + Capital Growth:** Combination of (b) and (c).
- e) **Speculation:** This type of investments does not promise safety of the initial investment along with the return on the principal amount. Speculators usually select investments with higher risk in order to profit from an anticipated price movement. Speculation involves a significant risk of the loss of the principal investment.
